

## Additional resources: Hierarchical clustering

© ExploreAl Academy

This reference document is designed to complement and enhance the material we have covered on hierarchical clustering.

## References:

- 1. In hierarchical clustering, we create a tree-like visual representation of the observations, called a dendrogram. Instead of deciding in advance how many clusters we'll use, we can use this representation to guide the hierarchy of clusters of interest.
  - Hierarchical clustering [ISLR]
- 2. A StatQuest video on hierarchical clustering.
  - Hierarchical clustering
- 3. In this tutorial, 365DataScience introduces the two major types of clustering: flat and hierarchical. They then explain the dendrogram, a visualisation of hierarchical clustering.
